

# MARMORINA

Marmorina is a white powder to be dissolved in water, to create models, figurines and reproductions in general.

It hardens without firing and gains the appearance and hardness of ceramic. Its main benefits are:

- Absolute non- toxicity
- Easy to use
- Cold coring without additives in only a few minutes
- True likeness to original
- Can be easily decorated with acrylic enamels.

## General hints:

Pour Marmorina powder into the right quantity of water, mix carefully to obtain a homogeneous and fluid consistency and cast it slowly into the mould trying to avoid air bubbles. Make sure that the object is well aired to allow a quick evaporation of water. After 8 hours the object can be painted.

## Technical data:

RATIO MARMORINA POWD. / WATER	3,5/1
POT - LIFE at 25C°	8 minutes
SEEMING HARDENING	15 - 20 minutes
COMPLETE HARDENING	72 hours
SEEMING DENSITY (gr/cm3)	1,1 / 1,2
MASS DENSITY (kg/m3)	2600
COMPRESSIVE STRENGTH	300
